PERSONAL & ACADEMIC PROJECTS

FIDIKO – Electronic Voting and Election Management Application

Designed and developed a secure web-based voting application enabling users to participate in electronic elections while allowing administrators to manage elections, candidates, voters, and real-time voting results.

K2TH: Kaody Koja Teknika Hira Scout (January 2026)

Application for learning and practicing scout technical codes and songs.
Built with React Native and SQLite.

Reserved Parking Management (April 2025)

Web application built with Python, AngularJS, CSS and PostgreSQL, enabling parking spot reservations along with an admin interface to track, approve or reject requests.

Flight Management (June 2024)

Web application built with C#, ReactJS and PostgreSQL, used to schedule flights and book seats according to class and seat availability in each cabin
